ABSTRACT OF THE INVENTION

A spindle or worm drive for adjusting devices, especially seat adjustment devices, window lifters and sliding roofs, in 5 motor vehicles. The drive includes a fixed spindle or relatively fixed toothed rack which is secured to the second of the two parts. The gear elements are mounted in a housing which includes at least two plates that can be secured to each other by plug-type connectors. The connectors are also 10 configured as supporting joints that absorb the forces of the gear.
